

# ENVIRONMENTAL CRIMES WORKSHOP 2024

11-12 June 2024 | ESA-ESRIN, Frascati, Italy

## Detecting waste crime with satellite models: From Sentinel-2 to Super-Resolution deep learning for enhanced waste site detection

George Boldeanu<sup>1</sup>, Mihaela Violeta Gheorghe<sup>1</sup>, Teodora Selea<sup>1</sup>, Ray Purdy<sup>2</sup>

<sup>1</sup> GMV Innovating Solutions Romania, <sup>2</sup> ASE-Air and Space Evidence

ESA UNCLASSIFIED - For ESA Official Use Only

The project has been selected for funding by the EC within the Horizon Europe programme, under the topic HORIZON-CL3-2021-FCT-01-09 - Fight against organised environmental crime

→ THE EUROPEAN SPACE AGENCY

## Environ**M**ental **cR**imes' in**T**elligence and investigation protocol based on m**U**ltiple data **S**ources

EMERITUS is an innovation project aimed at supporting Law Enforcement Authorities (LEA) and Border Guards (BG) in the investigation and evidence collection against waste-related environmental crimes. To this end, the project will offer a combined package of digital tools, including a single-entry point platform integrating advanced technologies, a training package, operative and train-the-trainers oriented, and an investigation protocol to guide LEAs and BGs in the integration of digital technologies in their daily operations.

# Challenges of waste management

Continuous growth of global population and its behaviour when it comes to socio-economic practices set the premise for a lot of environmental crimes. Illegal deposits and dump sites are the results of those practices. Globally, by 2040 there will be around 3.4 billion tons of waste. (Kaza, 2018). In Romania stricter EU regulations and imports of waste created an environment prone to multiplication of **illegal waste dumps**.

# Super-resolution approaches for waste identification

SRCNN

SRResNet

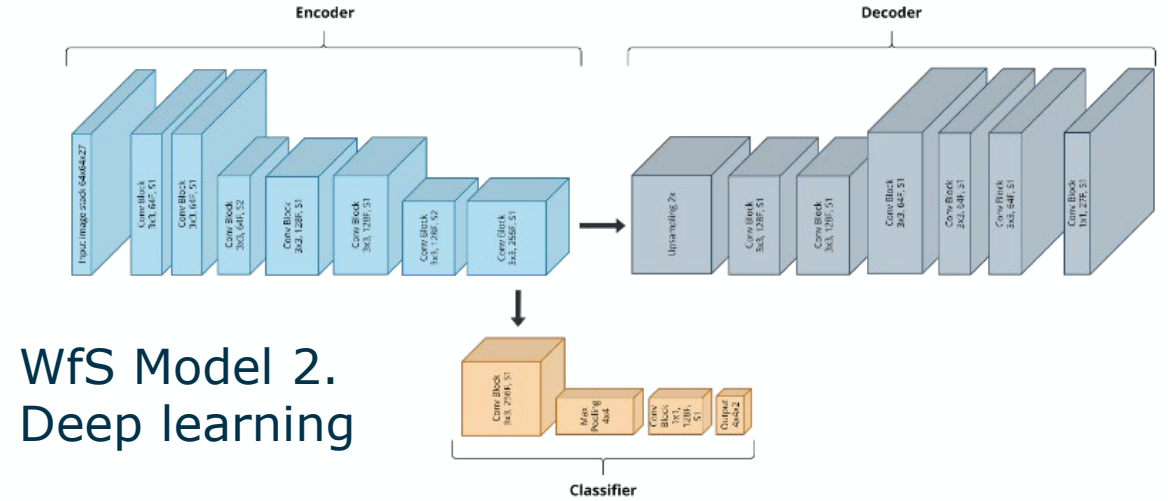

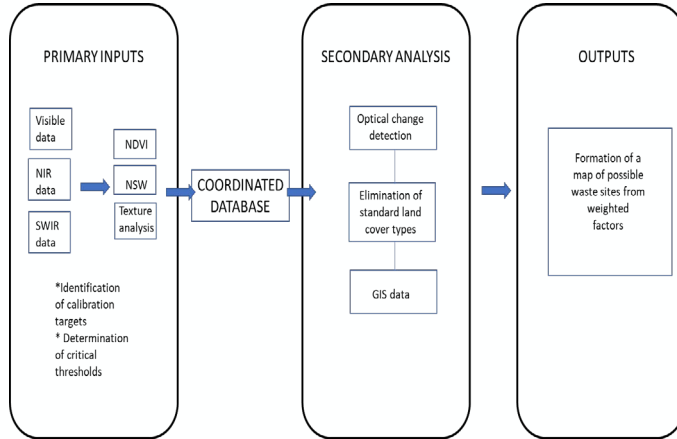

EDSR

RRDB

## WfS Model 1. Semi-automated (original)

## WfS Model 2. Deep learning

Models 1 and 2 use Sentinel satellite data, which is free, and enables us to examine large areas to detect potential waste sites, eventually at country scale. We use Sentinel data at a first stage to detect potential waste sites and then to examine these sites in detail using very high resolution images.

## Model 3. Hotspots (fires)

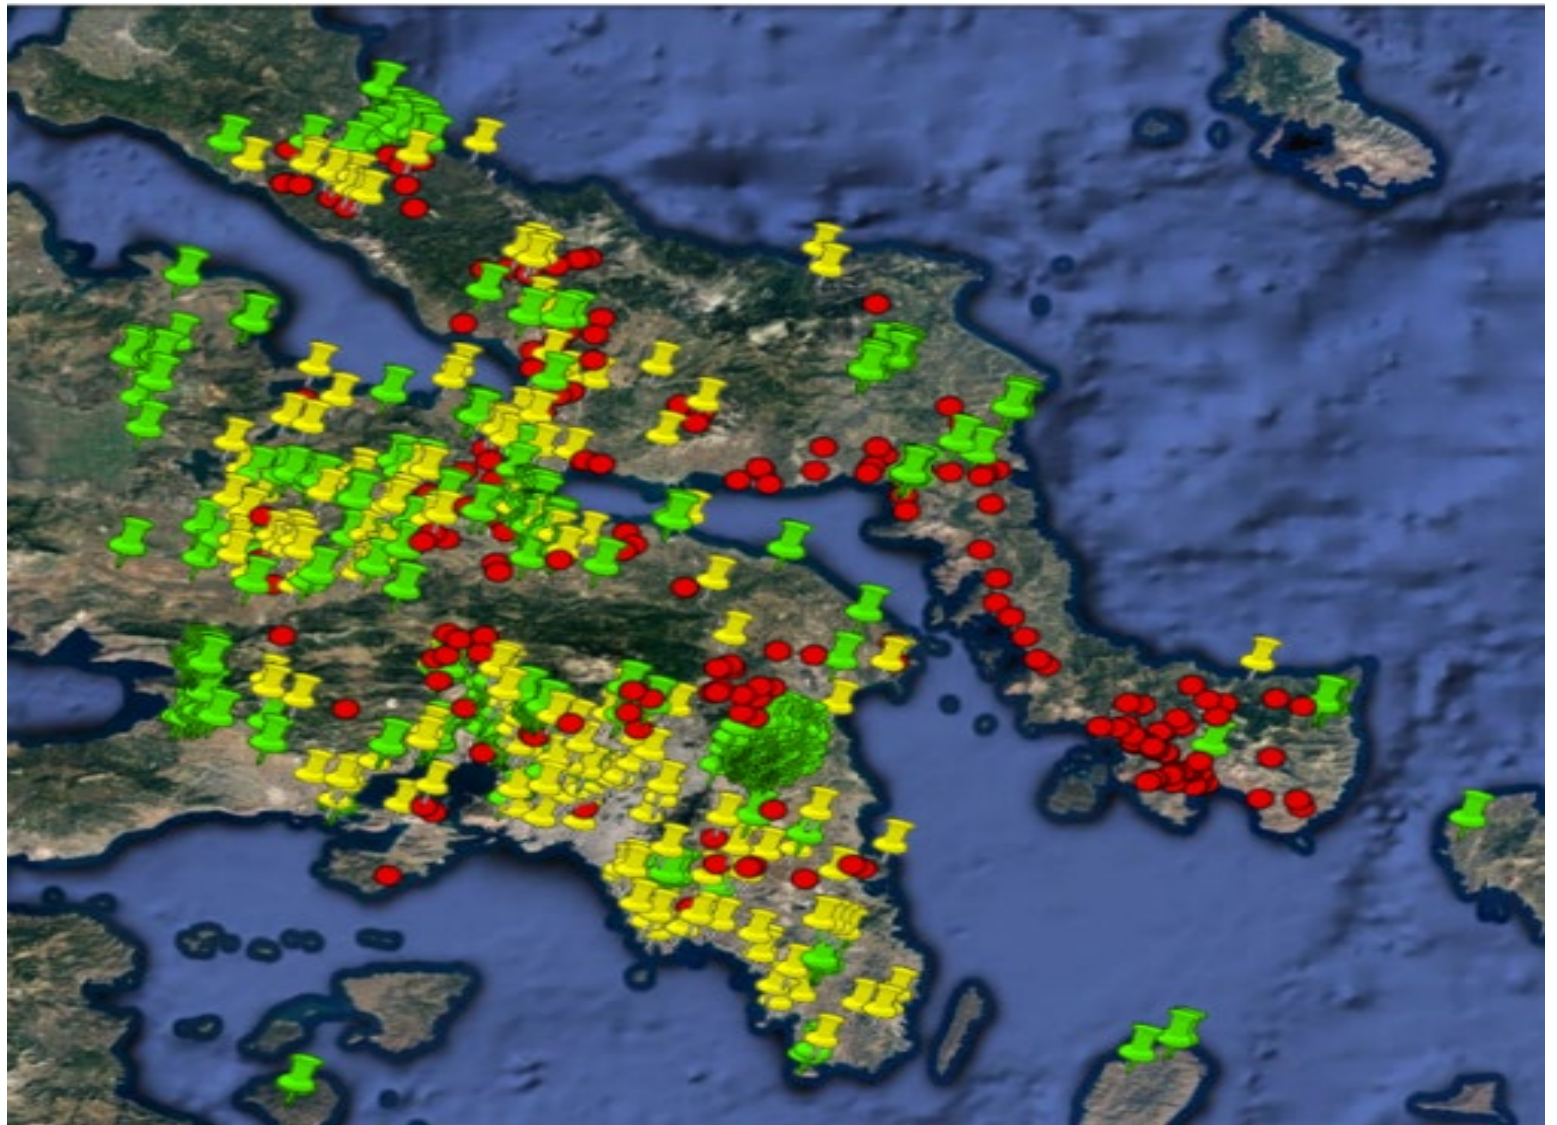

# Sentinel 2 tiles results from ASE models in Greece Athens region

Red dots - detection model 1

Yellow pins - detection model 2

Green pins – hotspots model 3

## Confirmed waste sites

About 55-70% of site locations we give to environmental protection authorities are found to be unlawful waste sites after site visits.

## Sites that were previously unknown

The Hellenic Police were not previously aware of 46% of the unlawful waste sites that they first visited.

The Ministry for the Environment, New Zealand found that 59% of the targets were previously unknown to them.

## Good intelligence finds

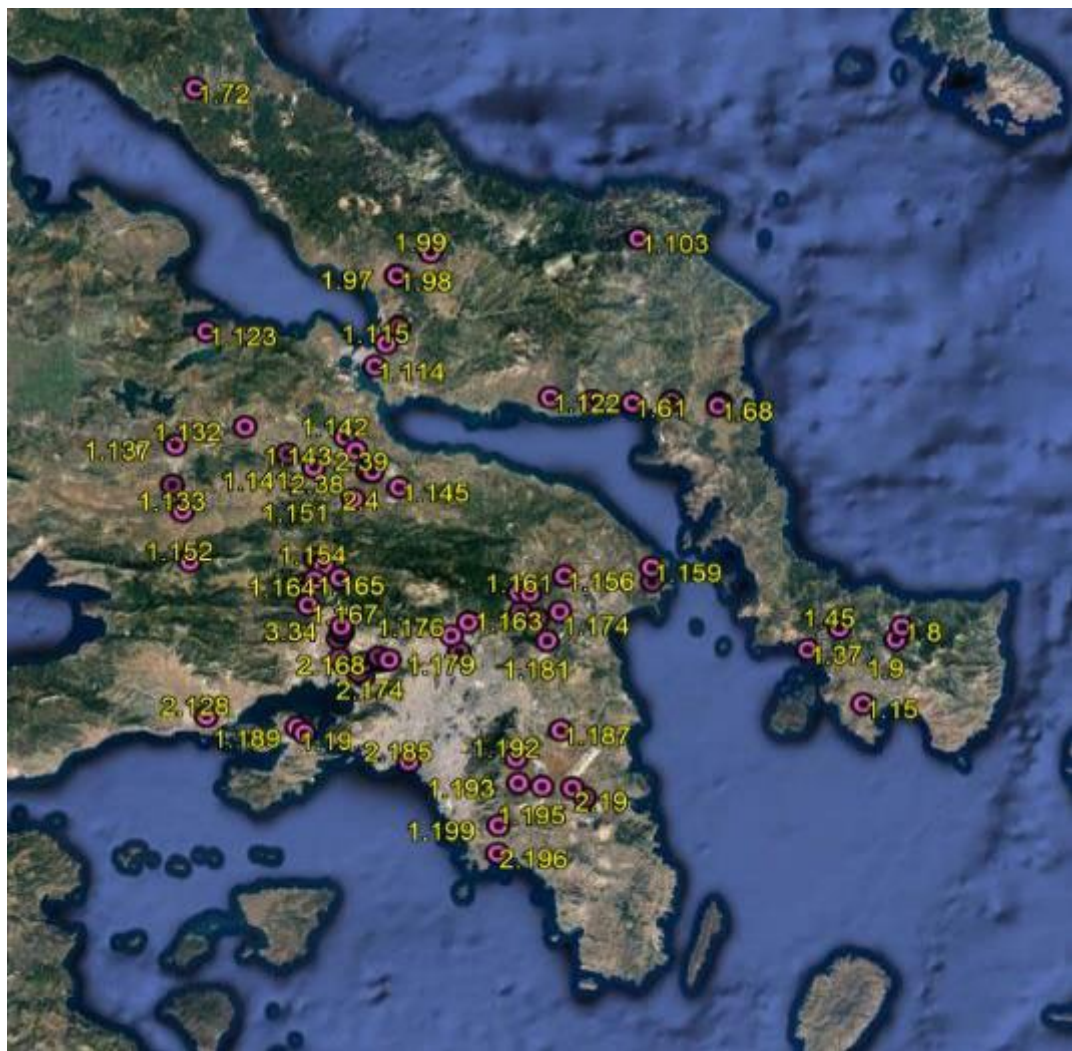

The Hellenic Police said that 34% of the sites from the total data given were 'very useful intelligence'.

In New Zealand 26% of the sites from the total data given were 'very good intelligence finds'.

**So low-cost data but high value intelligence.**

# Results and validation (category 1 are sites that are most likely to be unlawful, category 4 are least likely to be unlawful)

## WfS Model 1

Category 1 sites (59 cases)

Category 2 sites (38 cases)

Category 3 sites (48 cases)

Category 4 sites (54 cases)

## WfS Model 2

Category 1 sites (20 cases) – 12 after duplicates with other models

Category 2 sites (37 cases)

Category 3 sites (32 cases)

Category 4 sites (114 cases)

## Model 3 Hotspots

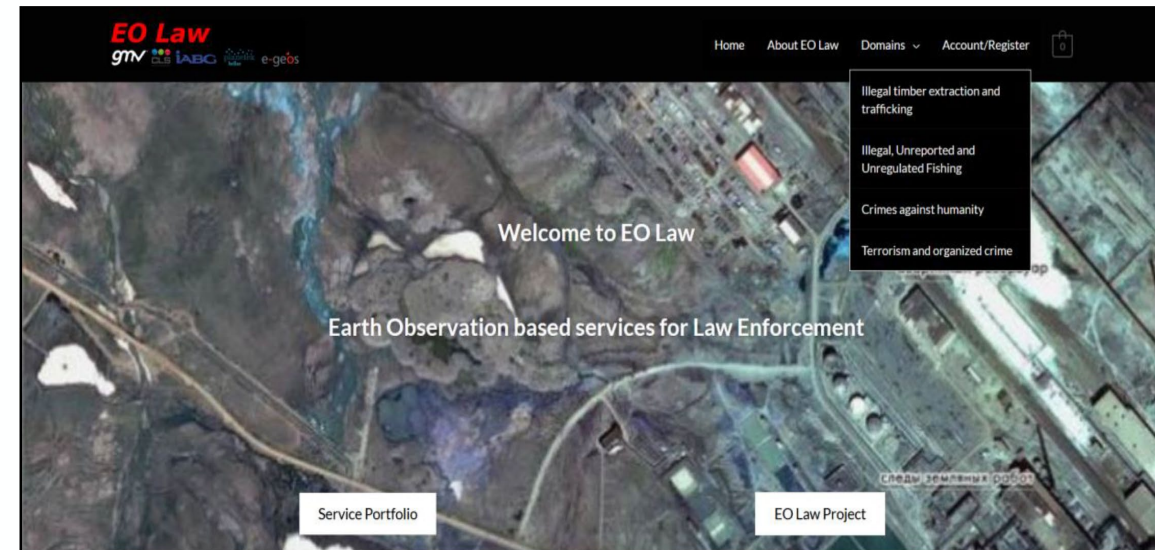

Category 1 sites (5 cases)

\* 76 sites given to the Hellenic Police to investigate on the ground.

**EOLAW was based on virtual platform technology to develop novel services based on EO data combined with ICT data analytics and non-EO data for the Law Enforcement sector**

## Objectives

- Demonstrate impact and benefit from an integrated approach combining multiple datasets and analyses for stakeholders in the Law Enforcement domain
- Increase awareness, acceptance and understanding of the potential benefits in the Law Enforcement domain of using EO derived information
- Test prototype capabilities as a possible basis for future operational implementation
- Enable flexible access to EO derived information and analytic capabilities compliant with standards, formats and practices

**Users :** Interpol, Europol (observer), International Criminal Court, Indian Ocean Commission (Regional Maritime Information Fusion Centre), Forest Stewardship Council certification, ENCE, Xunta de Galicia, World Uyghurs Congress, Federal Criminal Police Office of Germany (Observer), Austrian Ministry of Interior (Observer)

# Environmental crimes – Illegal timber extraction and trafficking

## DETECTION AND MONITORING OF FOREST CHANGE

### Added value for the stakeholders:

- Large areas being continuously analysed for the presence of clear cuts
- Various formats of outputs customized for different use cases
- Identify suspicious activities that could be further investigated (e.g., route characterization, logging machinery, etc.)
